

Tailgate Spreader

GOOD ROADS
Since 1878™

By Godwin 1-800-637-7651

The Good Roads under tailgate spreader is designed for trucks that are equipped with a central hydraulic system. It is designed to spread granular material such as salt or sand/salt mixes and fits a 96" wide dump bed. It has quick attach hardware and the spreader is constructed of corrosion resistant 201-2B stainless steel. A 6" auger with 3/8" flighting is standard and is powered by a hydraulic motor which provides steady material flow. The auger is shot blasted, epoxy primed, and powder coated black. The idler end of the auger is supported by a 2-1/8" ID bearing for superior performance. It has a three point hinged trough with a safety quick disconnect which allows for easy trough clean-out or clearing of debris.

Tall end shields (spill shields) are standard. A 6 paddle 18" poly spinner disc is standard, is designed for 1-4 lanes of spread width and powered by a hydraulic motor. The spinner assembly is designed to fold down while cleaning trough or be removed when not needed.

Available options

- 5:1 Gearbox
- 9" Auger
